Section A [40 Marks]

Question 1.

(a) If \( A = \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} \) and \( I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \), find \( A^2 - 5A + 7I \). [3]

(b) The monthly pocket money of Ravi and Sanjeev are in the ratio 5 : 7. Their expenditures are in the ratio 3 : 5. If each saves ₹ 80 every month, find their monthly pocket money. [3]

(c) Using the Remainder Theorem factorise completely the following polynomial:

\[ 3x^3 + 2x^2 - 19x + 6 \]  

Solution:

(a) Let

\[ A = \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} \]

and \( I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \),

than \( A^2 = \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} \)

\[ = \begin{bmatrix} 9-1 & 3+2 \\ -3-2 & -1+4 \end{bmatrix} = \begin{bmatrix} 8 & 5 \\ -5 & 3 \end{bmatrix} \]

\[ A^2 - 5A + 7I = \begin{bmatrix} 8 & 5 \\ -5 & 3 \end{bmatrix} - 5 \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix} + 7 \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \]

\[ = \begin{bmatrix} 8 & 5 \\ -5 & 3 \end{bmatrix} - \begin{bmatrix} 15 & 5 \\ -7 & 10 \end{bmatrix} + \begin{bmatrix} 7 & 0 \\ 0 & 7 \end{bmatrix} \]

\[ = \begin{bmatrix} 8-15+7 & 5-5+10 \\ -5+5+0 & 3-10+7 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix} = 0 \]

Ans.

(b) Let monthly pocket money of Ravi is 5x and Sanjeev is 7x.

\[ \frac{5x - 80}{7x - 80} = \frac{3}{5} \]

\[ \Rightarrow \quad 25x - 400 = 21x - 240 \]

\[ \therefore \quad 4x = 160 \]

\[ \therefore \quad x = 40 \]

Ravi's pocket money = \( 5 \times 40 = ₹ 200 \)

Sanjeev's pocket money = \( 7 \times 40 = ₹ 280 \)

Ans.

(c) Let \( f(x) = 3x^3 + 2x^2 - 19x + 6 \)

Using hit and trial method,

\[ f(1) = 3 + 2 - 19 + 6 \neq 0 \]
\[ f(-1) = -3 + 2 + 19 + 6 = -6 \]
\[ f(2) = 24 + 8 - 38 + 6 = 0 \]
\[ \therefore (x - 2) \text{ is a factor of } f(x). \]

Now,
\[
\begin{array}{c}
3x^2 + 8x - 3 \\
\hline
x - 2 \mid 3x^3 + 2x^2 - 19x + 6 \\
\hline
3x^2 - 6x \\
\hline
8x^2 - 19x \\
\hline
8x^2 - 16x \\
\hline
-3x + 6 \\
\hline
-3x + 6 \\
\hline
0
\end{array}
\]

To factorise \[ 3x^2 + 8x - 3 \]
\[ = 3x^2 + 9x - x - 3 \]
\[ = 3x(x + 3) - 1(x + 3) \]
\[ = (3x - 1)(x + 3) \]

Hence \[ 3x^3 + 2x^2 - 19x + 6 = (x - 2)(3x - 1)(x + 3) \]

**Question 2.**

(a) On what sum of money will the difference between the compound interest and simple interest for 2 years be equal to ₹ 25 if the rate of interest charged for both is 5% p.a.? \[ [3] \]

(b) \( ABC \) is an isosceles right angled triangle with \( \angle ABC = 90^\circ \). A semi-circle is drawn with \( AC \) as the diameter. If \( AB = BC = 7 \text{ cm} \), find the area of the shaded region. \( \left( \text{Take } \pi = \frac{22}{7} \right) \) \[ [3] \]

(c) Given a line segment \( AB \) joining the points \( A(-4, 6) \) and \( B(3, -3) \). Find:
(i) the ratio in which \( AB \) is divided by the \( y \)-axis.
(ii) find the coordinates of the point of intersection.
(iii) the length of \( AB \).

**Solution:**

(a) Let the principal be ₹ \( P \).
Given \( R = 5\% \), \( T = 24 \text{ years} \)

\[
\text{C.I. for 2 years} = P \left( 1 + \frac{5}{100} \right)^2 - P \\
\text{S.I. for 2 years} = \frac{P \times 5 \times 2}{100} = \frac{P}{10}
\]

\[ \therefore \text{Difference between C.I. and S.P.} = ₹ 25 \]

\[ P \left( 1 + \frac{5}{100} \right)^2 - P - \frac{P}{10} = 25 \]
\[
\begin{align*}
\frac{441P}{400} - \frac{11P}{10} &= 25 \\
\frac{441P - 440P}{400} &= 25 \\
P &= 10,000
\end{align*}
\]
Hence, the principle be 10,000

(b) Let ABC is a right angled triangle. So
\[
AC^2 = AB^2 + BC^2
\]
\[
= (7)^2 + (7)^2 = 2(7)^2
\]
\[
AC = 7\sqrt{2}
\]

Area of semi circle = \[
\frac{1}{2} \times \frac{22}{7} \times \left(\frac{7\sqrt{2}}{2}\right)^2
\]
\[
= \frac{1}{2} \times \frac{22}{7} \times \frac{49 \times 2}{4}
\]
\[
= 38.5 \text{ cm}^2
\]

Area of ΔABC = \[
\frac{1}{2} \times 7 \times 7 = 24.5 \text{ cm}^2
\]

\[
\therefore \text{ Area of shaded region} = \text{ Area of semi circle} - \text{ Area of ΔABC}.
\]
\[
= 38.5 - 24.5 = 14 \text{ cm}^2.
\]

(c) Let P be the point at which

(i) AB intersect y-axis

Let \[
AP : PB = m : n
\]
\[
x = \frac{mx_1 + nx_2}{m + n}
\]
and \[
y = \frac{my_1 + ny_2}{m + n}
\]
\[
0 = \frac{m \cdot 8 + n \cdot (-4)}{m + n}
\]
\[
\frac{8m - 4n}{m + n} = 0
\]
\[
\Rightarrow 8m = 4n
\]
\[
m : n = 1 : 2
\]

(ii) \[
y = \frac{my_2 + ny_1}{m + n}
\]
\[
= \frac{1 \times (-3) + 2 \times 6}{1 + 2}
\]

Using the above ratio, \[
y = \frac{-3 + 12}{1 + 2} = 3
\]
\[
\therefore \text{ Point of P be (0, 3)}
\]

(iii) \[
AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}
\]
\[
= \sqrt{(-4 - 8)^2 + (6 + 3)^2}
\]
\[
= \sqrt{144 + 81} = 15 \text{ units.}
\]
Question 3.
(a) In the given figure O is the centre of the circle and AB is a tangent at B. If AB = 15 cm and AC = 7.5 cm. Calculate the radius of the circle. [3]

(b) Evaluate without using trigonometric tables:
\[
\cos^2 26^\circ + \cos 64^\circ \sin 26^\circ + \frac{\tan 36^\circ}{\cot 54^\circ}
\]
[3]

c) Marks obtained by 40 students in a short assessment is given below, where a and b are two missing data.

<table>
<thead>
<tr>
<th>Marks</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td>No. of students</td>
<td>6</td>
<td>a</td>
<td>16</td>
<td>13</td>
<td>b</td>
</tr>
</tbody>
</table>

If the mean of the distribution is 7.2, find a and b. [4]

Solution:
(a) Applying intercept theorem,
\[
AC \times AD = AB^2
\]
\[
7.5 \times (7.5 + 2R) = 15^2
\]
where R is the radius of the circle
\[
(7.5 + 2R) = \frac{15 \times 15}{7.5} = 30
\]
\[
2R = 22.5
\]
\[
R = 11.25 \text{ cm.}
\]
Ans.

(b) Given:
\[
\cos^2 26^\circ + \cos 64^\circ \sin 26^\circ + \frac{\tan 36^\circ}{\cot 54^\circ}
\]
\[
= \cos^2 26^\circ + \cos (90^\circ - 26^\circ) \sin 26^\circ + \frac{\tan (90^\circ - 54^\circ)}{\cot 54^\circ}
\]
\[
= (\cos^2 26^\circ + \sin^2 26^\circ) + \frac{\cot 54^\circ}{\cot 54^\circ}
\]
\[
= 1 + 1 = 2
\]
Ans.

(c) Let
\[
6 + a + 16 + 13 + b = 40
\]
\[
\Rightarrow a + b = 5 \quad \ldots \text{(i)}
\]
Mean
\[
\bar{x} = \frac{\Sigma fx}{\Sigma f}
\]
\[
7.2 = \frac{30 + 6a + 112 + 104 + 9b}{40}
\]
\[
\Rightarrow 246 + 6a + 9b = 288
\]
\[
6a + 9b = 42 \quad \ldots \text{(ii)}
\]
Solving (i) and (ii), we get
\[
b = 4, \quad a = 1
\]
Ans.
Question 4.

(a) Kiran deposited ₹ 200 per month for 36 months in a bank's recurring deposit account. If the bank pays interest at the rate of 11% per annum, find the amount she gets on maturity.

(b) Two coins are tossed once. Find the probability of getting:

(i) 2 heads
(ii) at least 1 tail.

(c) Using graph paper and taking 1 cm = 1 unit along both x-axis and y-axis.

(i) Plot the points A(-4, 4) and B (2, 2)
(ii) Reflect A and B in the origin to get the images A' and B' respectively.
(iii) Write down the co-ordinates of A' and B'.
(iv) Give the geometrical name for the figure ABA'B'.
(v) Draw and name its lines of symmetry.

Solution:

(a) Given: P per month = ₹ 200, Time (n) = 36 months, R = 11%.

Equivalent principal for 36 months = $200 \times \frac{n(n+1)}{2}$

= $200 \times \frac{36 \times 37}{2}$

= $36 \times 37 \times 100$

Interest = $\frac{PRT}{100}$

= $\frac{36 \times 37 \times 100 \times 11 \times 1}{100 \times 12}$

= ₹ 1221

Maturity Amount = Pn + Interest

= $200 \times 36 + 1221$

= ₹ 8421.

(b) If two coins are tossed once, then

Sample Space (S) = {H H, HT, TH, TT}

n (S) = 4

(i) E : getting two heads = {H H}

n(E) = 1

∴ P (E) = $\frac{n(E)}{n(S)} = \frac{1}{4}$

(ii) E : At least one tail = {HT, TH, TT}

n (E') = 3

∴ P (E') = $\frac{n(E')}{n(S)} = \frac{3}{4}$
(c) (i) Please see graph.
(ii) Please see graph.
(iii) \( A' (4, -4) \)
\( B' (-2, -2) \)
(iv) Rhombus
(v) Two lines of symmetry.
Both diagonals, \( AA' \) and \( BB' \)

SECTION B [40 Marks]
Answer any four Questions in this Section.

Question 5.
(a) In the given figure, \( AB \) is the diameter of a circle with centre \( O \).
\( \angle BCD \) = 130°. Find:
(i) \( \angle DAB \)
(ii) \( \angle DBA \)

(b) Given \[
\begin{bmatrix}
2 & 1 \\
-3 & 4
\end{bmatrix}
\begin{bmatrix}
x \\
y
\end{bmatrix} =
\begin{bmatrix}
7 \\
6
\end{bmatrix}
\]
Write:
(i) the order of the matrix \( X \)
(ii) the matrix \( X \)

(c) A page from the Savings Bank Account of Mr. Prateek is given below:

<table>
<thead>
<tr>
<th>Date</th>

</table>
If he receives ₹198 as interest on 1st January, 2007, find the rate of interest paid by the bank.

Solution:
(a) On joining BD, ∠ADB is in the semicircle.

∠ADB = 90°

(Angle in a semicircle is right angle)

(i) Let ABCD is a cyclic quadrilateral.

∠BCD + ∠DAB = 180°
130° + ∠DAB = 180°
∠DAB = 180° - 130° = 50°

(ii) Now, ∠BAD + ∠BDA + ∠DBA = 180°
90° + 50° + ∠DBA = 180°
∠DBA = 40°

(b) (i) Order of matrix X is 2 x 1.
(ii) Let

\[
X = \begin{bmatrix}
a \\
b \\
\end{bmatrix}
\]

\[
\begin{bmatrix}
2 & 1 \\
-3 & 4 \\
\end{bmatrix}
\begin{bmatrix}
a \\
b \\
\end{bmatrix}
= \begin{bmatrix}
7 \\
6 \\
\end{bmatrix}
\]

\[
\begin{bmatrix}
2a + b \\
-3a + 4b \\
\end{bmatrix}
= \begin{bmatrix}
7 \\
6 \\
\end{bmatrix}
\]

2a + b = 7
-3a + 4b = 6

Solving (1) and (2), we get

\[a = 2, \ b = 3\]

\[
X = \begin{bmatrix}
2 \\
3 \\
\end{bmatrix}
\]

(c) | Months     | Minimum Balance |
-----|-----------------|
     |                 |
January | 3,580           |
February | 3,580           |
March | 1,580           |
April | 7,780           |
May | 7,780           |
June | 3,280           |
July | 3,280           |
August | 3,280           |
September | 5,910          |
October | 5,910           |
November | 2,690           |
December | 4,190           |
     | 3,240           |
     | **Total**       |
     | **₹ 52,800**    |
Now,

\[
\text{Principal} = \₹ 52,800 \\
\text{Time = 1 month} = \frac{1}{12} \text{ year,} \\
\text{Interest} = \₹ 198 \\
I = \frac{PRT}{100} \\
\frac{52,800 \times R \times 1}{100 \times 12} = 198 \\
R = 4.5\%.
\]

**Question 6.**

(a) The printed price of an article is \₹ 60,000. The wholesaler allows a discount of 20% to the shopkeeper. The shopkeeper sells the article to the customer at the printed price. Sales tax (under VAT) is charged at the rate of 6% at every stage. Find:

(i) the cost to the shopkeeper inclusive of tax.

(ii) VAT paid by the shopkeeper to the Government.

(iii) the cost to the customer inclusive of tax.

(b) Solve the following inequation and represent the solution set on the number line:

\[4x - 19 < \frac{3x}{5} - 2 \leq \frac{-2}{5} + x, x \in R\]

(c) Without solving the following quadratic equation, find the value of 'm' for which the given equation has real and equal roots.

\[x^2 + 2 (m - 1)x + (m + 5) = 0\]

**Solution:**

(a) (i) **Given:** Printed price of the article = \₹ 60,000

and

discount = 20% of \₹ 60,000

\[= \frac{20}{100} \times 60,000 = \₹ 12,000\]

\[\therefore \text{Sale price of the article} = 60,000 - 12,000 = \₹ 48,000\]

Sales tax paid by the shopkeeper = 6% of \₹ 48,000

\[= \frac{6}{100} \times 48,000 = \₹ 2,880\]

\[\therefore \text{The cost of the shopkeeper inclusive of tax} = 48,000 + 2,880 = \₹ 50,880.\]

(ii) VAT paid by shopkeeper = Tax charged - Tax paid

\[= 60,000 \times \frac{6}{100} - 48,000 \times \frac{6}{100} = \₹ 720\]

(iii) Sales tax paid by the customer = 6% of \₹ 60,000

\[= \frac{6}{100} \times 60,000 = \₹ 3,600\]

\[\therefore \text{The cost to the customer inclusive of tax} = 60,000 + 3,600 = \₹ 63,600.\]
(b) Given: 
\[ 4x - 19 \leq \frac{3x}{5} - 2 \leq \frac{2}{5} + x \]
\[ 4x - 19 < \frac{3x}{5} - 2 \quad \text{and} \quad \frac{3x}{5} - 2 \leq \frac{2}{5} + x \]
\[ \frac{17x}{5} < 17 \quad \text{and} \quad -\frac{2x}{5} \leq \frac{8}{5} \]
\[ x < 5 \quad \Rightarrow \quad x \geq -4 \]
Solution set = \{x: 5 > x \geq -4\}

(c) Given: \( x^2 + 2(m-1)x + (m+5) = 0 \)
For real and equal roots,
\[ b^2 - 4ac = 0 \]
\[ \begin{align*}
\quad & b^2 \quad = \quad 4ac \\
\quad \text{Comparing given equation (i) with } ax^2 + bx + c = 0, \text{ we get} \\
\quad a &= 1, \quad b = 2(m-1), \quad c = (m + 5) \\
\quad \text{Now,} \quad & \begin{align*}
4 \quad (m-1)^2 &= 4 \quad (m + 5) \\
\quad m^2 - 3m - 4 &= 0 \\
\quad m^2 - 4m + m - 4 &= 0 \\
\quad m \quad (m-4) + 1 \quad (m-4) &= 0 \\
\quad m &= 4 \text{ or } m = -1 \\
\text{Ans.}
\end{align*}
\end{align*} \]

Question 7.

(a) A hollow sphere of internal and external radii 6 cm and 8 cm respectively is melted and recast into small cones of base radius 2 cm and height 8 cm. Find the number of cones.

(b) Solve the following equation and give your answer correct to 3 significant figures:
\[ 5x^2 - 3x - 4 = 0 \]

(c) As observed from the top of a 80 m tall lighthouse, the angles of depression of two ships on the same side of the light house in horizontal line with its base are 30° and 40° respectively. Find the distance between the two ships. Give your answer correct to the nearest metre.

Solution:

(a) Given: External Radius \( R = 8 \text{ cm} \), Internal Radius \( r = 6 \text{ cm} \),
\[ \text{Volume of hollow spheres} = \frac{4}{3} \pi (R^3 - r^3). \]
\[ \text{Volume of hollow spheres} = \frac{4}{3} \pi [8^3 - 6^3] \]
\[ = \frac{4}{3} \pi [512 - 216] = \frac{4}{3} \pi (296) \]
\[ \text{Volume of cones} = \frac{1}{3} \pi r^2 h \]
\[ = \frac{1}{3} \pi (2)^2 (8) \]
Number of cones = \( \frac{\text{Volume of sphere}}{\text{Volume of cones}} = \frac{\frac{4}{3} \pi \times 296}{\frac{1}{3} \pi \times 4 \times 8} \)

= \( \frac{296}{8} = 37 \) cones.  Ans.

(b) Given: \( 5x^2 - 3x - 4 = 0 \)

Comparing given equation with \( ax^2 + bx + c = 0 \), we get

\( a = 5, b = -3, c = -4 \)

Let \( x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \)

\( x = \frac{3 \pm \sqrt{(-3)^2 - 4 \times 5 \times (-4)}}{2 \times 5} \)

\( x = \frac{3 \pm \sqrt{9 + 80}}{10} = \frac{3 \pm \sqrt{89}}{10} = \frac{3 \pm 9.43}{10} \)

Taking +ve sign

\( x = \frac{3 + 9.43}{10} = 1.243 \)

and taking -ve sign

\( x = \frac{3 - 9.43}{10} \)

\( = \frac{-6.43}{10} \)

\( = -0.643 \)

\( x = 1.243 \text{ or } x = -0.643 \)  Ans.

(c) In \( \triangle ABC \),

\( \tan 50^\circ = \frac{BC}{80} \)

\( \Rightarrow \quad BC = 80 \times 1.1918 \)

\( \therefore \quad BC = 95.34 \text{ m} \)

In \( \triangle ABD \),

\( \tan 60^\circ = \frac{BD}{80} \)

\( \therefore \quad BD = 80 \sqrt{3} \)

\( \therefore \quad BD = 138.56 \text{ m} \)

\( \therefore \quad CD = BD - BC \)

\( = 138.56 - 95.34 \)

\( = 43.2 \text{ m.} \)  Ans.

Question 8.

(a) A man invests ₹ 9,600 on ₹ 100 shares at ₹ 80. If the company pays him 18% dividend find:

(i) the number of shares he buys.

(ii) his total dividend.

(iii) his percentage return on the shares.  [3]
(b) In the given figure ΔABC and ΔAMP are right angled at B and M respectively.

Given \( AB = 10 \text{ cm}, \ AP = 15 \text{ cm} \) and \( PM = 12 \text{ cm} \).

(i) Prove \( \Delta ABC \sim \Delta AMP \).

(ii) Find \( AB \) and \( BC \).

(c) If \( x = \frac{\sqrt{a+1} + \sqrt{a-1}}{\sqrt{a+1} - \sqrt{a-1}} \), using properties of proportion show that \( x^2 - 2ax + 1 = 0 \).

Solution:

(a) Given: Investment = ₹ 9,600, N.V. = ₹ 100, M.V. = ₹ 80, Div. % = 18%

(i) Number of shares = \( \frac{\text{Investment}}{\text{M.V. of each share}} \)

\[ \frac{9600}{80} = 120 \text{ shares} \]

Ans.

(ii) Total dividend = \( \frac{18}{100} \times 120 \times 100 \)

\[ = ₹ 2,160 \]

Ans.

(iii) Since \( \text{N.V} \times \text{Div} \% = \text{M.V.} \times \text{Return} \% \)

\[ \text{Return} \% = \frac{100 \times 189}{80} \]

\[ = 22.5\% \]

Ans.

(b) (i) In \( \Delta ABC \) and \( \Delta APM \),

\[ \angle ABC = \angle AMP = 90^\circ \]

\[ \angle BAC = \angle PAM \text{ (Common)} \]

\[ \therefore \quad \Delta ABC \sim \Delta APM \]

(ii) Also, \( \frac{AC}{AP} = \frac{BC}{PM} \)

\[ \Rightarrow \quad \frac{10}{15} = \frac{BC}{12} \]

\[ \therefore \quad BC = 8 \text{ cm.} \]

Ans.

\[ \therefore \Delta ABC \text{ is right angled} \triangle. \]

Applying Pythagoras,

\[ AB^2 = AC^2 - BC^2 \]

\[ = 10^2 - 8^2 \]

\[ \therefore \quad AB = 6 \text{ cm.} \]

Ans.

(c) Given:

\[ x = \frac{\sqrt{a+1} + \sqrt{a-1}}{\sqrt{a+1} - \sqrt{a-1}} \]
Using componendo and dividendo,
\[ \frac{x + 1}{x - 1} = \frac{\sqrt{a + 1}}{\sqrt{a - 1}} \]
Squaring both sides,
\[ \frac{(x + 1)^2}{(x - 1)^2} = \frac{a + 1}{a - 1} \]
again using componendo and dividendo,
\[ \frac{x^2 + 1}{2x} = \frac{a}{1} \]
\[ \Rightarrow \quad x^2 - 2ax + 1 = 0 \]
Hence Proved

Question 9.
(a) The line through A (-2, 3) and B (4, b) is perpendicular to the line \(2x - 4y = 5\). Find the value of b.
   \[ \text{[3]} \]
(b) Prove that \[ \frac{\tan^2 \theta}{(\sec \theta - 1)^2} = \frac{1 + \cos \theta}{1 - \cos \theta} \]
   \[ \text{[3]} \]
(c) A car covers a distance of 400 km at a certain speed. Had the speed been 12 km/h more, the time taken for the journey would have been 1 hour 40 minutes less. Find the original speed of the car.
   \[ \text{[4]} \]

Solution:
(a) Slope of AB \( (m_1) \) = \[ \frac{y_2 - y_1}{x_2 - x_1} \] = \[ \frac{b - 3}{4 + 2} = \frac{b - 3}{6} \]
Equation of given line \(2x - 4y = 5\)
\[4y = 2x - 5\]
\[y = \frac{1}{2}x - \frac{5}{4}\]
Slope of given line \( (m_2) \) = \[ \frac{1}{2} \]
As per the question, line are perpendicular.
\[ m_1 \cdot m_2 = -1 \]
\[ \frac{b - 3}{6} \cdot \frac{1}{2} = -1 \]
\[ \Rightarrow \]
\[ b - 3 = -12 \]
\[ b = -9 \]
Ans.
(b) L.H.S. = \[ \frac{\tan^2 \theta}{(\sec \theta - 1)^2} \]
\[ = \frac{\sec^2 \theta - 1}{(\sec \theta - 1)^2} \]
\[ = \frac{(\sec \theta - 1)(\sec \theta + 1)}{(\sec \theta - 1)^2} \]
\[ = \frac{1}{\sec \theta - 1} \]
\[ = \frac{1 + \cos \theta}{1 - \cos \theta} = \text{R.H.S.} \]
Hence Proved
(c) Let the original speed of car be \( x \) km/hr.

Usual time = \( \frac{400}{x} \), New speed = \( x + 12 \), New time = \( \frac{400}{x + 12} \)

According to the condition:

\[
\frac{\frac{400}{x} - \frac{400}{x + 12}}{\frac{x + 12}{x}} = \frac{5}{3}
\]

\[
\frac{1}{x(x + 12)} = \frac{1}{240}
\]

\[
x^2 + 12x - 2880 = 0
\]

\[
x^2 + 60x - 48x - 2880 = 0
\]

\[
x(x + 60) - 48(x + 60) = 0
\]

\[x = -60 \text{ or } x = 48\]

But speed cannot be negative.

Original speed = 48 km/hr

Ans.

Question 10.

(a) Construct a triangle ABC in which base BC = 6 cm, AB = 5.5 cm and \( \angle ABC = 120^\circ \).

(i) Construct a circle circumscribing the triangle ABC.

(ii) Draw a cyclic quadrilateral ABCD so that D is equidistant from B and C.

(b) The following distribution represents the height of 160 students of a school.

<table>
<thead>
<tr>
<th>Height (in cm)</th>
<th>No. of students</th>
</tr>
</thead>
<tbody>
<tr>
<td>140-145</td>
<td>12</td>
</tr>
<tr>
<td>145-150</td>
<td>20</td>
</tr>
<tr>
<td>150-155</td>
<td>30</td>
</tr>
<tr>
<td>155-160</td>
<td>38</td>
</tr>
<tr>
<td>160-165</td>
<td>24</td>
</tr>
<tr>
<td>165-170</td>
<td>16</td>
</tr>
<tr>
<td>170-175</td>
<td>12</td>
</tr>
<tr>
<td>175-180</td>
<td>8</td>
</tr>
</tbody>
</table>

Draw an ogive for the given distribution taking 2 cm = 5 cm of height on one axis and 2 cm = 20 students on the other axis. Using the graph, determine:

(i) The median height.

(ii) The interquartile range.

(iii) The number of students whose height is above 172 cm.

Solution:

(a) (i) Steps of constructions:

(1) Draw a line segment BC = 6 cm.

(2) Construct \( \angle CBP = 120^\circ \).

(3) Cut BA = 5.5 cm from BP.

(4) Join A to C.

(5) Construct perpendicular bisectors of AB and BC, intersecting at O. Join AO.

(6) Taking as the centre and OA as radius draw a circle, passing through, A, B, and C.
(ii) (1) Extend the right bisector of BC intersecting the circle at D.

(2) Join A to D and C to D.

(3) ABCD is required cyclic quadrilateral.

<table>
<thead>
<tr>
<th>Height</th>
<th>f</th>
<th>c.f.</th>
</tr>
</thead>
<tbody>
<tr>
<td>140–145</td>
<td>12</td>
<td>12</td>
</tr>
<tr>
<td>145–150</td>
<td>20</td>
<td>32</td>
</tr>
<tr>
<td>150–155</td>
<td>30</td>
<td>62</td>
</tr>
<tr>
<td>155–160</td>
<td>38</td>
<td>100</td>
</tr>
<tr>
<td>160–165</td>
<td>24</td>
<td>124</td>
</tr>
<tr>
<td>165–170</td>
<td>16</td>
<td>140</td>
</tr>
<tr>
<td>170–175</td>
<td>12</td>
<td>152</td>
</tr>
<tr>
<td>175–180</td>
<td>8</td>
<td>160</td>
</tr>
</tbody>
</table>

(i) \( M_e = 157.3 \)  \textbf{Ans.}

(ii) Interquartile range
     \[ Q_3 - Q_1 = 164.1 - 151.3 = 12.8 \] \textbf{Ans.}

(iii) No. of students above 172 cm = 160 - 144 = 16. \textbf{Ans.}

Question 11.

(a) In triangle PQR, \( PQ = 24 \text{ cm} \), \( QR = 7 \text{ cm} \) and \( \angle PQR = 90^\circ \).

Find the radius of the inscribed circle.

(b) Find the mode and median of the following frequency distribution:

<table>
<thead>
<tr>
<th>x</th>
<th>10</th>
<th>11</th>
<th>12</th>
<th>13</th>
<th>14</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>f</td>
<td>1</td>
<td>4</td>
<td>7</td>
<td>5</td>
<td>9</td>
<td>3</td>
</tr>
</tbody>
</table>
508 | ICSE Last 10 Years Solved Papers

(c) The line through \( P(5, 3) \) intersects \( y \) axis at \( Q \).

(i) Write the slope of the line.

(ii) Write the equation of the line.

(iii) Find the co-ordinates of \( Q \).

Solution:

(a) Given: \( \triangle PQR \) is right angled.

\[
PR^2 = PQ^2 + QR^2
\]
\[
= (24)^2 + (7)^2
\]
\[
= 576 + 49 = 625
\]

\( PR = 25 \text{ cm} \)

Draw \( \perp r \) from \( O \) on \( PQ \) and \( PR \) and mark as \( B \) and \( C \) respectively.

\[
\angle OBQ = \angle OAQ = \angle OCR = 90^\circ
\]

(\( \angle \) between radius and tangent is \( 90^\circ \))

All \( \angle \)'s of \( OAQB \) are \( 90^\circ \) and \( QA = QB \)

(Since the tangent to a circle from an exterior point are equal in length).

\( \therefore \) \( OAQB \) is a square.

\[
QA = QB = x
\]

\[
AR = 7 - x = RC
\]

\[
BP = 12 - x = PC
\]

\[
PB = PC (\text{Since } AR = RC, PB = PC)
\]

\[
PC + RC = PR
\]

\[
7 - x + 12 - x = 25
\]

\[
x = 3 \text{ cm}
\]

(b) Mode is the value of the highest frequency.

Mode = 14

Ans.

For Median, we write the data in ascending order,

10, 11, 11, 11, 12, 12, 12, 12, 12, 12, 12, 13, 13, 13, 13, 13, 14, 14, 14, 14, 14, 15, 15, 15.

\( \therefore \) Median is the middle most value.

\[
M_{e} = \left( \frac{N + 1}{2} \right)^{th} \text{ observation}
\]

\[
= \left( \frac{29 + 1}{2} \right)^{th} = 15th \text{ observation} = 13
\]

Ans.

(c) (i) Slope of line \( PQ = \tan 45^\circ = 1 \)

(ii) Equation of line \( PQ : \)

\[
y - y_1 = m (x - x_1)
\]

\[
y - 3 = 1 (x - 5)
\]

\[
y = x - 2
\]

(iii) Put \( x = 0 \) in equation of line \( PQ \).

\[
y = -2
\]

Coordinate of \( Q = (0, -2) \)

Ans.
